

LegiTest

Automated Testing for All Your Data-Driven Solutions

LEGITEST HIGHLIGHTS

Build Your Test in Minutes

Quickly develop tests in minutes, not hours without writing any code.

Unit Test Your Data

Unit test your SQL Databases, SSIS Packages, SSRS Reports, SSAS Cubes, Web Services and more to validate the code you develop.

Test Your BI Solutions

Implement automated testing of your Business Intelligence and Data Warehouse projects so you can trust the code you deploy.

Reconcile Your Production Data

Ensure that your production data is accurate and reconciled across your systems like SQL Server, Salesforce, Web Services, Oracle and much more!

Visual Studio Integration

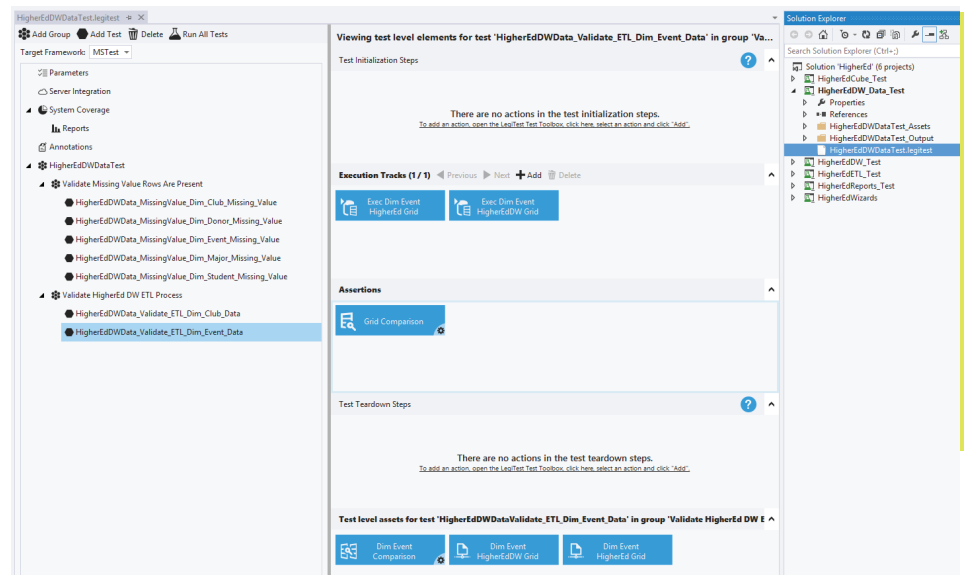

LegiTest's interface integrates simply into Visual Studio so you do not have to learn a new development environment.

Extensible

The extensibility interface allows for extending the functionality of the generated tests.

LegiTest is a comprehensive tool that allows you to test all your data-centric applications, in an easy-to-use, automated platform. It easily integrates with Visual Studio and your existing development software.

LegiTest enables you to test all aspects of the SQL Server stack. This includes testing of database objects such as stored procedures, functions, views and tables. It further includes all objects on the BI stack, including SSIS Packages, SSAS Cubes and Dimensions (both Tabular and Multidimensional) and SSRS reports.

Build complex testing code directly in Visual Studio using LegiTest's drag and drop interface and graphical designers.

LEGITEST SERVER

With LegiTest Server, everyone in your business can see real-time results for tests built with the LegiTest developer client. LegiTest Server enables you to execute and view the results of tests created with LegiTest developer client. It also tracks historical results for the tests, giving you the ability to compare and validate today's test results against yesterday's or anytime in the past.
