COST REDUCTION

Are You Wasting Time on Outdated Systems?

The cost of maintaining a redundant, underutilized backup infrastructure is challenging. Taking advantage of cloud for disaster recovery and business continuity is the most effective way to ensure high availability while paying only for what you use, not idle equipment.

Do You Have a Backup Plan in Place?

With the most active hurricane, fire and earthquake seasons in a long time, keeping businesses online and operational is a key concern. Most companies don't focus on business continuity until it's too late and have untested, barebones recovery plans, leaving them in chaos during and after the situation.

Pragmatic Works is the expert in hybrid cloud solutions, with special offerings to help customers protect their businesses from expensive outages. Our most common levels of protection are designed to fit your needs and budget:

- **Enterprise Hybrid Architecture:** Keeping on-premise and cloud systems integrated and always online, ready for any issues or interruptions.
- **On-Demand Recovery:** Keeping a low cost, replicated copy of your environment in the cloud on standby, ready to deploy quickly in the event of an outage or disaster.

6-Week Agenda:

- **Phase 1:** Assess applications, data and build DR roadmap
- **Phase 2:** Build out DR Environment
- **Phase 3:** Build out automation frameworks
- **Phase 4:** Test and document new DR environment
