

Pragmatic Works

CLOUD MIGRATION ACCELERATOR

MICROSOFT'S PREMIER CLOUD & DATA PARTNER

Top Benefits:

AUTOMATION

IMPROVED
MANAGEABILITY

TIME SAVINGS

COST REDUCTION

Companies today are balancing their infrastructure spending between the cloud and on-premise data centers to minimize cost while confidently meeting their compute demands. However, whether to move their applications and data to the cloud 100% or in a Hybrid model can be confusing and daunting.

The Cloud Migration Accelerator uses Pragmatic Works' cloud expertise to identify applications and databases that are the best fit for the cloud. During this process we'll:

- Remove limitations and frustrations by moving off legacy platforms (Oracle, Teradata, Netezza, Sybase, etc.)
- Create and optimize migration and deployment model
- Forecast an intelligent cost estimate
- Reduce migration time by up to 75%

6-Week Agenda:

- **Phase 1:** Discovery and review sessions that will walk you through submitting MAPS data. After the discovery session is complete, our cloud architect will prepare and review your customized migration plan.
- **Phases 2-4:** Execution of migration plan and testing and production deployments.
- **Phases 5-6:** Completion of migration, testing and deployment. Additional training will also be provided to train your team on the management of your new environment.
