

Data Storytelling with Power BI

ON-DEMAND LEARNING

Course Overview

The introduction to Logic Apps course is designed to teach the fundamentals of building automated workflows using the Logic App Designer provided in the Azure Portal. This course quickly progresses from building basic logic apps from the provided templates to designing more complex and reusable automated workflows from scratch.

Course Outline

- Class Introduction
- The Need for Storytelling
- The Data Storytelling Process
- The Data Storytelling Lifecycle
- Data Storytelling Tools
- Scheduling and Administration

Prerequisites

It is highly recommended that you first take our Introduction to Power BI course first.

- Power BI Desktop
- A Power BI Pro account in the Power BI Service
- Access to PowerApps with the ability to create Canvas apps
- Access to create an Azure SQL Database.

System Requirements

- Microsoft Azure Account (Paid or Trial)
